FOR FINANCE, CAPITAL PROGRAM, AND BUDGET TEAMS

Municipal bond project oversight, from delivery to financial planning.

One standard quarterly update across every project, manager, and department, so finance can plan funding and the city can keep council and the public informed.

Capital program view. Sample data: Riverbend, a fictional city.

The problem

Capital program data lives in spreadsheets and email. Every quarter, staff chase updates and rebuild the same report. Operating costs surface late, and bond proceeds sit apart from the projects they fund.

The BondIQ answer

Bond project oversight that connects project delivery to financial planning. The same update, every quarter, across the program. It is not project management or debt-service software, and it does not replace a financial advisor or bond counsel.

1 Capital project updates

One recurring quarterly update across projects, managers, and departments. Budget, spending, funding by source, projected expenses, and milestone dates roll into planning for the whole program. Funding gaps surface early as cost estimates change.

2 CIP portfolio reporting

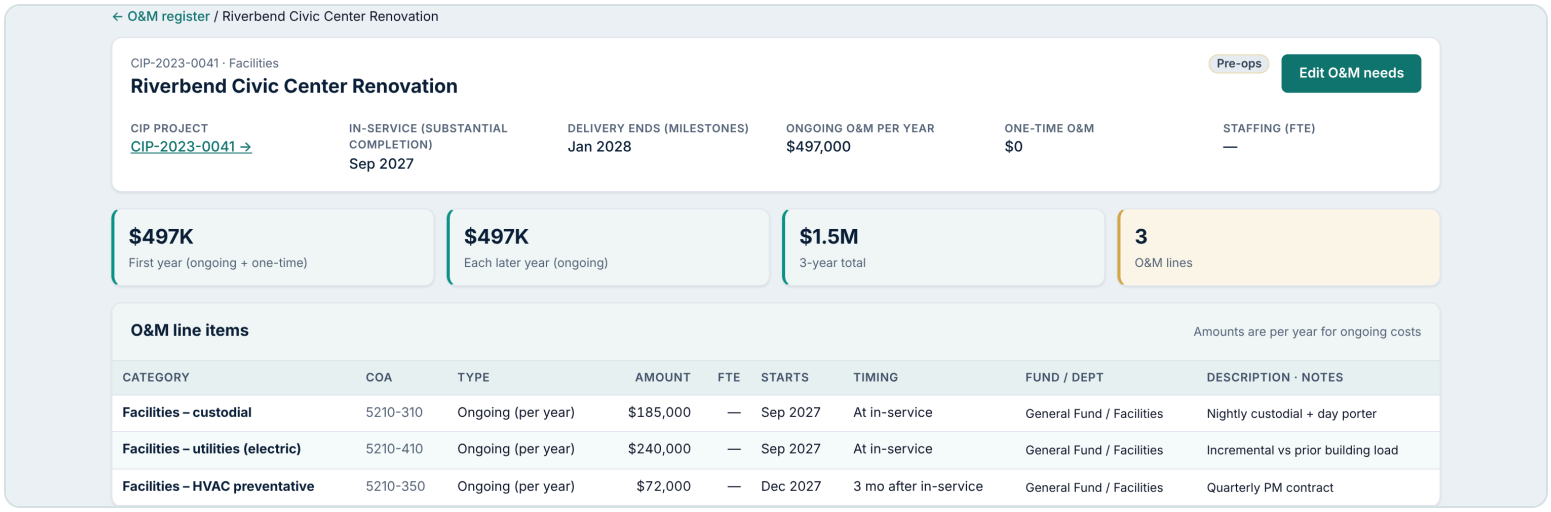

One current view of budget, spending, schedule, and risk, filtered by department, district, and risk. See which projects still owe an update. Export a spreadsheet or a council-ready PDF. Reporting can stay internal, with options for public transparency.

3 Operating and maintenance

Know what each new asset will cost to operate and maintain. Bonds do not pay ongoing operating costs. In-service dates show when those costs begin, so operating budgets can plan years ahead.

4 Bond issuance and proceeds

Finance staff enter each bond authorization and series. Latest schedules, spending, and cost estimates inform issuance timing. Projects can draw on bonds, grants, and other funding sources. A planning aid, not legal or tax advice.

Operating and maintenance. Sample data: Riverbend, a fictional city.

Built for public trust

- Each city's records stay separate from every other city.
- Every change stays on the record.
- Roles for project staff, city admins, and finance admins. Three admin seats to start.
- Each city sets its fiscal year, and sets funding, expense, and O&M categories to match its chart of accounts.
- Council reads PDF reports. No login required.
